"Complete genomic sequence of Pasteurella multocida Pm?
Proc. Natl. Acad. Sci. U.S.A. 98:3460-3465(2001).
-!- CATALYTIC ACTIVITY: Inosine 5'-phosphate + NAD(+) +
xanthosine 5'-phosphate + NADH.
-!- PATHWAY: FIRST REACTION UNIQUE TO GMP BIOSYNTHESIS.
-!- SUBUNIT: HOMOTETRAMER (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                          _PASMU

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical inaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI;
                                                                                                                                       Claim 20; SEQ ID
                                                                                                                                                              New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                    N-PSDB;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amaino acid sequences. ABG00010-ABG30377 represent novel human
                                                                                                                                                                                                                                                                                                                                                                                                             diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not a specification, but was obtained in electronic for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving

The inventues of the developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                   in Ashbya gossypii. The enzymes described in the invention include Phosphoribosylpyrophosphate (PPRP) synthetases KPR1 and KPR2 glutamine-phosphororibosylpyrophosphate amidotransferase (ADB4) IMP-dehydrogenase (GUA1) and a GMP-synthetase (GUA2). The nucleic acid sequences encoding the enzymes involved in purine biosynthesis are used to genetically modify microorganisms, for the production of riboflavin. Riboflavin, also known as vitamin B2, is essential in humans and animals and is used to treat inflammation of the mouth and throat mucosal layer as well as inflammation in skin disorders. This sequence represents a fragment of the inosine-monophosphate dehydrogenase protein encoded by the GUA1 gene represented in AAX78081.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Purine blosynthesis; phosphoribosylpyrophosphate synthetase; KPR1; KPR2; glutamine-phosphororibosylpyrophosphate amidotransferase; ADB4; GGA1; IMP-dehydrogenase; GUA1; GWP-synthetase; GUA2; PRPP synthetase; nouth; riboflavin; vitamin B2; treatment; inflammation; throat; mucosal layer;

                                                         polymerase chain reaction (PCR) primers, oligomers, and for chromosome cand gene mapping, and in recombinant production of (II). The polymerase chain reaction (PCR) primers, oligomers, and for chromosome cand gene mapping, and in recombinant production of (II). The complex cand gene mapping, and in recombinant production of (II). The polymerase dependence in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques contributed in the sequence of the restore normal activity of (II) or to treat disease states involving contributed in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical contributes expressing (II), (I) are useful for treating contributes involving aberrant protein expression or biological activity. The polymeride and polynucleotide sequences have applications in contributed and polynucleotide sequences have applications in contributed and polynucleotide sequences have application of mutations contributed sequences. ABGO0010-ABGO0377 represent novel human contributed sequences of the invention.

Note: The sequence data-for this patent did not appear in the printed contributed contributed in the printed contributed in the printed contributed in the printed contributed in the printed contributed contributed in the printed contributed contributed contributed contributed contributed contributed contributed contributed contributed co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess biodiversity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention provides the protein and coding sequences of a number of apoptosis associated proteins from the yeast Saccharomyces cerevisiae and the fungus Candida albicans. These can be used to identify treatments for fungal and yeast infections, for proliferative diseases and for apoptosis related diseases such as autoimmune diseases, ischaemia and neurodegeneration. The present sequence is one of the S. cerevisiae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI;

                                                                        CC polypeptide (II) sequences. (I) is useful as hybridisation probes, cpolypeptide (II) sequences. (I) is useful as hybridisation probes, cpolymerase chain reaction (PCR) primers, oligomers, and for chromosome cc and gene mapping, and in recombinant production of (II). The complynucleotides are also used in diagnostics as expressed sequence tags cc for identifying expressed genes. (I) is useful in gene therapy techniques cc for identifying expressed genes. (I) is useful in gene therapy techniques cc (II). (II) is useful for generating antibodies against it, detecting or creating an expression or contribution of (II) or to treat disease states involving cc (II). (II) is useful for generating antibodies against it, detecting or creating an expression or contribution of supplement. (II) and its binding partners are useful in medical considered involving aberrant protein expression or biological activity. CC diagnostics, forensics, gene mapping, identification of mutations in cc diagnostics, forensics, gene mapping, identification of mutations considered in the produce other types of data and products dependent on DNA and contributed and no acid sequences of the Invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 В

               The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery are proteins.
                                                                                                                                                                                                                                                                                                                                                                        New polynucleotides for the identification and development of antibiotics, comprise sequences of antisense nucleic acids -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antisense; antibiotic;

Included in the invention are sequences AAF22032 - AAF22040 and AAB59129 which are used in the isolation and characterisation of the DNA and protein sequences of the invention. The breast and ovarian cancer associated DNA, protein, agonist or antagonist sequences exhibit cytostatic; immunosuppressive; nootropic; neuroprotective; antiviral; antiallergic; hepatotropic; antidabetic; antiinflammatory; antivirae; antiallergic; activity. The polynucleotide and protein sequences are used in the diagnosis of cancer, particularly breast and ovarian cancer. The nucleic acid sequences, proteins, agonists and agonists may also be used in the diagnosis, prevention and treatment of immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, rheumatoid arthiritis and allicitis, contributed and solitics, multiple sclerosis, rheumatoid arthiritis and allicitis, contributed and solitics, multiple sclerosis, rheumatoid arthiritis and allicitis and allic

CC (II), given in AAG81454 to AAG83120, from Staphylococcus epidermidis. CC (II), given in AAG81454 to AAG83120, from Staphylococcus epidermidis. CC (I) and (II) can have antibacterial activity and therefore can be used CC in vaccination. The nucleic acids (I) may be used to produce the CC s. epidermidis polypeptides (II) via the production of vectors CC containing them which are used to produce hosts cells which express the CC used to vaccinate subjects and to raise antibodies against the bacteria. CC The polypeptides may also be used to assay for other inhibitors of their CC treatment of S. epidermidis infections, e.g. endocarditis. AAH53971 to CC AAH55090 represent specifically claimed S. epidermidis genomic DNA CC polynucleotide sequences from the present invention. AAH55091 to CC AAH55098 represent oligonucleotide sequences and primers which are used in the exemplification of the present invention. CC N.B. The present invention specifically claims all the polynucleotide sequence listing only goes up to SEQ ID NO:4454 so even though sequences are given in the disclosure for SEQ ID NO:4465 to 4472, and the content of the present invention.

                                                                                                                                                                                                                                                                                                             The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Corynebacterium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Coryneform bacterium; amino acid synthesis; vitamin; saccharide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         26-SEP-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAG90418,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             В
(bto) gene cluster from Pseudomonas sp. WF505, specifically the protein which controls expression of the gene cluster (AAY97827), the benzothiophene oxidase (bto) enzyme itself (AAY97825) and a benzothiophene oxidase co-enzyme (AAY97824), which controls benzothiophene activity via redox regulation. These enzymes are respectively encoded by the bto gene cluster open reading frames ORF2-16 (AAA38398), ORF4-9 (AAA38396) and ORF6-7 (AAA38395). The invention also encompasses genetic constructs and vectors comprising the genes encoding these proteins, hosts containing such constructs and the recombinant production of the enzymes. Pseudomonas sp. WF505 benzothiophene oxidase, benzothiophene oxidase co-enzyme and bto gene cluster regulator are
                                                                                                                                                                                                                                                                                                                                                                                                                            New proteins useful for desulfurization of control expression of benzothiophene oxidase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            N-PSDB;
                                                                                                                                                                                                                                                                                                                                                                     Example 1;
